PATLITE Corporation

Newly developed reflector for LED revolving warning light.

PATLITE LED revolving warning light uses a unique (patented) reflecting system solely designed for these models. Even though the dispersion effect of the LED unit is less than an incandescent bulb, PATLITE LED revolving warning light creates the equivalent dispersion effect with the light reflector.

New designed reflector enables not only upward and sideward light reflections, but also downward light reflection that is not secured for incandescent bulb type revolving warning light. PATLITE LED revolving warning light is suitable for the application where the high visibility from downward is required.
